Steps prior to writing a paper

Have a story to tell…
Where to start?

1. Results
   - Do not publish just to publish
   - Negative results can be published, wrong results not!

2. Figures

3. Structure of the paper: titles & subtitles

4. Discuss with supervisors & co-authors – make a plan

5. Read journal’s guide for authors
   (e.g., https://www.elsevier.com/journals/learning-and-instruction/0959-4752/guide-for-authors)

Article’s structure and content

- Title
  - Short & attractive

Which title is concise but also includes sufficient information to make the paper stand out?

1. Characterization of a landfill using geophysical data
2. Characterization of a heterogeneous landfill using geophysical data
3. Characterization of a heterogeneous landfill using seismic and electrical resistivity data
4. Characterization of a heterogenous landfill using seismic and electrical geophysical data.
Article’s structure and content

- Authors – Affiliation
  - Who should be your co-author? Who should be the first author?
    (e.g., https://www.psi.ch/integrity/dokumente)
  - Use correct affiliation (incl. present address)

- Keywords
  - General words (e.g., landfills)
  - Specific to your research (e.g., MASW)

- Highlights
  - Short sentences which describe the main findings and motivation of your research
Article’s structure and content

• Abstract
  • Attract the interest of the reader, do not simply summarize your study
  • Three main components:
    a) What is the problem and what is the focus of your paper?
    b) What are the main methods you used?
    c) What are the results? - Simply mention them with no explanation

• Graphical abstract
  • An innovative figure to get the interest of the reader
Article’s structure and content

• Introduction
  • What is the problem? Explain in detail and use specific phrases to make your point clear.
    – «There is an increasing need to...»
    – «It is critical to understand the...»
  • What has been done till now and why is this not enough (gap)?
  • Provide clear objectives of your article. Explain why your paper is innovative.
    – «The objectives were to investigate the following:...»
    – «The first goal of our paper is...»
  • In the end, shortly summarize the content of your paper.
Article’s structure and content

- Main body
  - Laboratory/field measurements, theory, models, results
  - Explain your measurement (theory/model), procedure (parameters) chronologically
  - Add information such as time & place
  - Describe the figures – be specific in both the main text and the figure caption
  - Provide a detailed description – do not assume things are self-explanatory
Article’s structure and content

• Discussion
  • Yes or no?
  • Criticism of your own work can help in the reviewing process
  • Opportunity to point out other applications of your work
  • Do not refer to future work you will do
  • Do talk about the difficulties you had, but only if you are already planning a way to solve them.
    – “There were difficulties in...”
    – “The results will be much better if...”
  • Helps to connect with your next article:
    – “In Konstantaki, et al., 2014 we found that...The goal of this paper is to further investigate....”
Article’s structure and content

• Conclusions
  • Short & precise
    – “We studied the...”
    – “We investigated the potential...”
• Acknowledgements
• References
  • Use a reference management software (Module 1 & Module 5)
  • Do not cite just to cite
  • Avoid too many self-citations
  • Read the papers you cite
Article’s structure and content

- Figures
  - Follow the instructions in the authors’ guide
  - When using figures from other authors, check the copyright (Module 3)
  - Compare same things
  - Be careful with the color scale
Exercise 1

• Describe your research in one or two sentences (elevator pitch)
• Make a short outline of your research or of the next paper you are planning to write
