Getting started with $\text{\LaTeX}$ Managing the Bibliography

Unless otherwise noted, this work is licensed under a Creative Commons Attribution 4.0 International License, which means that it can be freely copied, redistributed and adapted as long as appropriate attribution is given.

- `\thebibliography` environment
- `BIBTEX` (`LATEX` default bibliography management system)
- `BIBLATEX` package (with *biber* as backend)

`\thebibliography` environment

```
\begin{thebibliography}  
    \bibitem{label1} item 1  
    \bibitem{label2} item 2  
\end{thebibliography}  
  
\cite{label}
```

To cite properly while making easy to switch between citation styles and keeping the bibliographic data centralized.

BIB_TE_X and BIB_LA_TE_X let you

- keep one (structured!) file with bibliographic data for all your publications
- cite independently of citation styles (default, additional packages, defined by the publisher, self defined)

BIB_TE_X and BIB_LA_TE_X deal properly with

- different document types (books, articles, conference proceedings, theses, etc. . .)
- special characters (coded in $\text{\LaTeX}$)

```
@type{label,  
  field 1 = {value 1},  
  ...  
  field n = {value n},  
}
```

- *type*: article, book, booklet, conference, inbook, incollection, inproceedings, manual, masterthesis, misc, phdthesis, proceedings, techreport, unpublished
- *label* is any label (to use with `\cite{label}`)
- *field i*: address, annote, author, booktitle, chapter, crossref, edition, editor, howpublished, institution, journal, key, month, note, number, organization, pages, publisher, school, series, title, type, volume, year

- Depending on *type*, some *fields* are required, others are optional, yet others are ignored
- No comment character in bib files

```
@book{knuth1986,  
  author = {Knuth, Donald Ervin},  
  title = {The \textrm{\TeX}book},  
  series = {Computers & Typesetting},  
  volume = {{A}},  
  year = {1986},  
  publisher = {Addison-Wesley},  
  isbn = {978-0-201-13447-6},  
}  
@book{lampport1994,  
  author = {Lampport, Leslie},  
  title = {\textrm{\LaTeX}: A Document Preparation  
    edition = {2nd},  
  year = {1994},  
  publisher = {Addison-Wesley},  
  isbn = {978-0-201-52983-8},  
}  
@article{patashnik1994,  
  author = {Patashnik, Oren},  
  title = {\textrm{Bib\TeX} 1.0},  
  journal = {{TUG}boat},  
  year = {1994},  
  volume = {15},  
  number = {3},  
  pages = {269--273},  
}
```

- Add `\usepackage[options]{biblatex}` in the preamble
 - *options*: style, sorting...
- Add `\addbibresource[options]{bibfile}` in the preamble
 - *options*: bibencoding, label...
- Use `\cite[pre][post]{label}` in the text
 - *pre*: a string before the citation, *post*: a string after the citation
 - Additional commands: `\footcite`, `\parencite`, `\nocite`
- Add `\printbibliography[options]` where you want the bibliography
 - *options*: type, nottype, title=`{title}`

BIB_{La}T_EX

How to cite

```
\documentclass[a4paper]{article}

\usepackage[style=ieee]{biblatex}
\addbibresource{bibliography.bib}

\begin{document}
  In \cite{patashnik1994}, the author discusses the
  history of \textsc{Bib\TeX} and depicts his future plans
  for version~1.0.

  \printbibliography
\end{document}
```

In [1], the author discusses the history of Bib $\text{\LaTeX}$ and depicts his future plans for version 1.0.

References

- [1] O. Patashnik, “Bib $\text{\LaTeX}$ 1.0,” *TUGboat*, vol. 15, no. 3, pp. 269–273, 1994.

- Running `*latex` stores the BIB $\text{\LaTeX}$ -relevant data in the aux file
- Running `biber` reads the aux file and stores the bibliography in the bbl file
- Running `*latex` reads the bibliography from the bbl file and stores the citations in the aux file
- Running `*latex` again resolves the references by reading the `\bibcite` entries from the aux file

- Build your own bib file using *Google Scholar*, a publisher website of your choice or the website <https://doi2bib.org/>
- Using the file Exercise_4/ex_4.pdf as example, write a short text citing at least two articles (or books).
- Try different citation styles.
