

DORA is the institutional repository and bibliography for any publication authored, edited or published by Eawag, Empa, PSI or WSL or resulting from research performed at PSI research facilities. Each research institute has a separate [institutional DORA repository](#).

DORA acts simultaneously as: a) [bibliography](#) (DORA is a source for publication lists on the institutional websites and for academic reports); b) [archive](#) (DORA preserves the full texts of the institutes' publications); c) [Open Access \(OA\) repository](#) (researchers are able to make a full-text version of their scientific articles freely available in DORA).

Registering publications

Import

As a service, Lib4RI collects relevant items from external databases and enriches them with internal information. Once a publication is registered, authors are notified by e-mail and are kindly asked to provide feedback about the publication and, if necessary, the accepted version.

Submission

If a publication is not available in DORA, authors can submit the publication through an online form. Publications can be submitted as soon as they are published. All publications in DORA are shared with the public in accordance with copyright law and publisher policies.

DORA features

1 The **simple search** is available on the top right of every DORA page.

2 With the **advanced search**, search in a combination of specific fields, choose an organisational unit or search for full texts.

3 **Narrow down your search** with as many search criteria as you like. Click this symbol to add lines. You can choose between the Boolean operators «AND», «OR» and «NOT».

4 **Filter your search results.** After searching or browsing, choose from several filter options on the left. By selecting a filter option (e.g. authors), this filter will be added to your search. By choosing more options, you can narrow down your search to more specific results.

5 **To exclude or remove a filter**, simply click on the minus in front of the filter option.

Three symbols indicate **full-text accessibility**:

OA. The full text is available to everyone.

Closed Access as seen outside of the networks of the research institutes.

The grey lock changes to yellow within the networks, as the full text is only available to members of Eawag, Empa, PSI, and WSL within the institutional networks.

Tip:

- Only a Closed Access published version available? **Please submit the accepted version to DORA!** For more information on the benefits of submitting your accepted version to DORA please read our [Green Open Access website](#).

The screenshot shows two DORA interfaces. The top interface is DORA PSI, and the bottom is DORA Empa. Numbered callouts (1-13) point to various features: 1. Search bar; 2. Advanced Search link; 3. Search criteria input; 4. Filter By sidebar; 5. Minus sign on filter; 6. Full-text accessibility icons; 7. Help link; 8. Research unit link; 9. Export options; 10. Citation styles; 11. Author name input; 12. Submit button; 13. Footer.

7 **Go to the DORA help page.** There, you will find a wealth of information on DORA.

8 Here, you can find a **link to the research unit**, e.g. «PSI Laboratories». This also helps to identify missing accepted versions for Green Open Access.

9 **Export your publication list** as a PDF, RTF or RIS file. Four standard citation styles are available: ACS, APA, IEEE and Vancouver. Alternatively, you can choose the Eawag, PSI, or WSL institutional citation style.

10 **Export your publication list as an Excel or CSV file.** Simply click the respective symbol. The Excel and CSV files include metadata, such as authors, title, OA information, DOI, etc.

11 **Create an author publication list.** To search for an author, either use the alphabetic browsing tool or type the person's name. To get a full list of publications from a single specific author, simply click on the person's name.

12 It is possible to record more than one version of an author's name in DORA. For example, if an author changes the name due to marriage, all publications will still be linked to the same author.

12 **Submit a publication to DORA.** You can submit your publication as soon as it has been accepted and is online available. If the publisher has imposed an embargo, it will be available exclusively on the intranet until the embargo is lifted.

13 If you are not sure whether your document can be submitted to DORA (e.g. one-page publications, video formats, etc.), please **read the DORA Content Policy** on the submission form page. Please note that DORA does not record publications that are not directly related to the four research institutes within the ETH Domain (e.g. from your work at previous employers).

Publication versions

There are three main versions of a publication:

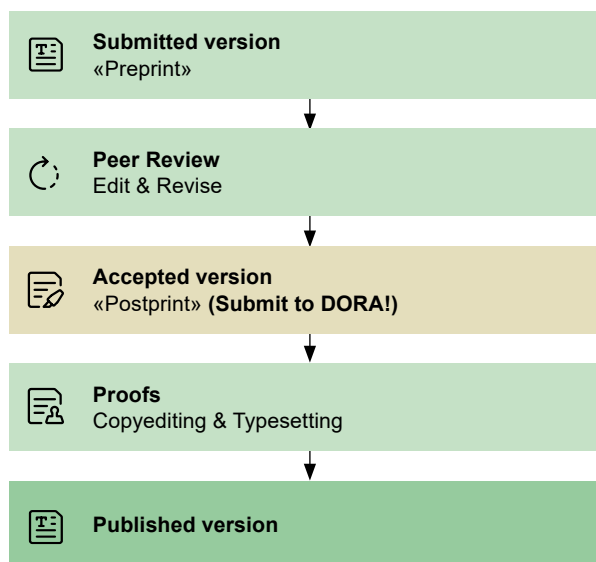

Submitted version

A submitted version («preprint») is an original manuscript submitted to a journal and considered for publication. It does not include revisions made during peer-review, copy-editing or formatting done by the publisher. **DORA does not accept submitted versions**, but many preprint servers do (e.g. [arXiv](#), [bioRxiv](#)).

Accepted version

An accepted version («postprint») is a final manuscript accepted for publication by a publisher. It includes all revisions made during peer-review, but does not include copy-editing or formatting done by the publisher. **Authors are encouraged to submit accepted versions to DORA as most journals allow accepted versions to be made OA in an institutional repository** (sometimes after an embargo). Please note that proofs and offprints sent to the author from the publisher are not accepted versions.

If you have trouble finding the accepted version of your paper on your computer, many journal submission systems store the accepted version for years. This [handy guide](#) provides simple-to-follow instructions for (corresponding) authors wishing to obtain an accepted version of their manuscript from the journal submission system of many publishers.

Published version

A published version is a final version of an article produced by a publisher with a journal's typeset and branding. As OA journals are increasing, the number of OA published versions is also rising. In some cases, even subscription journals allow published versions to be made OA. For more information on OA go to [Lib4RI](#) or see the [Lib4RI-Info: Open Access](#).
